CONSERVATION OF NATURAL RESOURCES

Revised 1944

This selected list of references, originally prepared by the Forest Service in San Francisco and the Extension Service in Berkeley, has been revised by the San Francisco Branch of the U. S. Department of Agriculture Library. Additional copies of the list may be obtained by writing to the U. S. Forest Service, 760 Market Street, San Francisco 2, the U. S. Soil Conservation Service, 2168 Shattuck Avenue, Berkeley, the Agricultural Adjustment Administration, 2283 Fulton Street, Berkeley, or the Agricultural Extension Service, 103 Giannini Hall, Berkeley.

Starred items may be obtained free of charge from the Soil Conservation Service or the Forest Service. Other items are obtainable only from the publishers and at the prices indicated. Most of the items will be found at your local public library.

CONSERVATION - GENERAL

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods used to collect and analyze data. It includes a detailed description of the sampling process and the statistical techniques employed to interpret the results.

3. The third part of the document presents the findings of the study. It shows that there is a significant correlation between the variables being studied, which supports the hypothesis that was tested.

4. The fourth part of the document discusses the implications of the findings for future research and practice. It suggests that the results of this study could be used to inform policy decisions and to guide the development of new programs and initiatives.

5. The fifth part of the document provides a conclusion and a summary of the key points. It reiterates the importance of the study and the need for further research in this area.

6. The sixth part of the document includes a list of references to the sources used in the study. It provides a comprehensive overview of the literature on the topic and highlights the contributions of the current study.

7. The seventh part of the document contains a list of appendices, which include additional data and information that is relevant to the study but is not included in the main text.

8. The eighth part of the document is a list of figures and tables, which provide a visual representation of the data and the results of the analysis.

9. The ninth part of the document is a list of footnotes, which provide additional information and clarification for the reader.

10. The tenth part of the document is a list of page numbers, which indicates the location of each section within the document.

1. The first part of the report deals with the general situation of the country and the progress of the work during the year. It is divided into two main sections: the first section deals with the general situation and the second section deals with the progress of the work.

2. The second part of the report deals with the results of the work during the year. It is divided into two main sections: the first section deals with the results of the work in the field and the second section deals with the results of the work in the laboratory.

3. The third part of the report deals with the conclusions of the work during the year. It is divided into two main sections: the first section deals with the conclusions of the work in the field and the second section deals with the conclusions of the work in the laboratory.

4. The fourth part of the report deals with the recommendations of the work during the year. It is divided into two main sections: the first section deals with the recommendations of the work in the field and the second section deals with the recommendations of the work in the laboratory.

5. The fifth part of the report deals with the summary of the work during the year. It is divided into two main sections: the first section deals with the summary of the work in the field and the second section deals with the summary of the work in the laboratory.

6. The sixth part of the report deals with the appendix of the work during the year. It is divided into two main sections: the first section deals with the appendix of the work in the field and the second section deals with the appendix of the work in the laboratory.

7. The seventh part of the report deals with the bibliography of the work during the year. It is divided into two main sections: the first section deals with the bibliography of the work in the field and the second section deals with the bibliography of the work in the laboratory.

8. The eighth part of the report deals with the index of the work during the year. It is divided into two main sections: the first section deals with the index of the work in the field and the second section deals with the index of the work in the laboratory.

9. The ninth part of the report deals with the list of figures of the work during the year. It is divided into two main sections: the first section deals with the list of figures of the work in the field and the second section deals with the list of figures of the work in the laboratory.

10. The tenth part of the report deals with the list of tables of the work during the year. It is divided into two main sections: the first section deals with the list of tables of the work in the field and the second section deals with the list of tables of the work in the laboratory.

THE EFFECT OF VITAMIN DEFICIENCY ON THE GROWTH OF THE RAT  
BY J. H. H. SMITH, JR., AND J. H. H. SMITH, JR.

The purpose of this study was to determine the effect of a diet deficient in vitamins upon the growth of the rat. The rats were divided into two groups, one receiving a normal diet and the other a diet deficient in vitamins. The results showed that the rats on the deficient diet grew much more slowly than those on the normal diet. This was true for both the weight gain and the length of the rats. The results also showed that the rats on the deficient diet had a higher mortality rate than those on the normal diet. This was true for both the rats that died during the experiment and those that died after the experiment.

The results of this study are of great importance in the study of the effect of vitamins upon the growth of the rat. They show that a diet deficient in vitamins can have a serious effect upon the growth of the rat. This is true for both the weight gain and the length of the rats. The results also show that a diet deficient in vitamins can have a serious effect upon the mortality rate of the rats. This is true for both the rats that died during the experiment and those that died after the experiment.

The results of this study are of great importance in the study of the effect of vitamins upon the growth of the rat.
